

## Summary

In this domain of the REMAP-CAP trial, participants with community-acquired pneumonia admitted to participating intensive care units requiring empiric antibiotic therapy will be randomized to receive one of up to 5 antibiotic interventions depending on availability and acceptability:

- Ceftriaxone + Macrolide
- Moxifloxacin or Levofloxacin
- Piperacillin-tazobactam + Macrolide
- Ceftaroline + Macrolide
- Amoxicillin-clavulanate + Macrolide

At this participating site the following interventions have been selected within this domain:

<b>Beta-lactam and Macrolide Options</b>		
<b>Beta-Lactam interventions for this site</b>		<b>Combined with one IV macrolide option and one enteral option chosen by site</b>
<input type="checkbox"/> Ceftriaxone	<i>One of beta-lactam interventions (randomized) combined with an Intravenous (IV) option and an enteral macrolide option</i>	<input type="checkbox"/> IV Azithromycin
<input type="checkbox"/> Piperacillin-tazobactam		<input type="checkbox"/> IV Clarithromycin
<input type="checkbox"/> Ceftaroline		<input type="checkbox"/> IV Erythromycin
<input type="checkbox"/> Amoxicillin-clavulanate		<input type="checkbox"/> No IV preparation
<b>Respiratory Fluoroquinolone Options</b>		<input type="checkbox"/> Enteral Azithromycin
<input type="checkbox"/> Moxifloxacin	<i>Fluoroquinolone options chosen by site (randomized)</i>	<input type="checkbox"/> Enteral Clarithromycin
<input type="checkbox"/> Levofloxacin		<input type="checkbox"/> Enteral Roxithromycin
		<input type="checkbox"/> No Enteral preparation

Is the site participating in the Antibiotic Domain? **Yes/No**
