

## Summary

In this domain of the REMAP-CAP trial, participants meeting the platform-entry criteria for REMAP-CAP with microbiological testing confirmed COVID-19 infection will be randomized to receive one of two interventions:

- No immunoglobulin against COVID-19 (no placebo)
- High titer convalescent plasma

At this participating site the following interventions have been selected within this domain:

- No immunoglobulin against COVID-19 (no placebo)
- High titer convalescent plasma

This Domain has domain-specific stratum. Sites that participate in this domain must participate in both domain-specific stratum.

Is the site participating in the Immunoglobulin Domain? **YES/NO**  
(If yes, please also indicate participation in the different states below)
