

REMAP-CAP Corticosteroid Domain-Specific Appendix Version 5.1 dated 16 October 2023

Summary

In this domain of the REMAP-CAP trial, participants with community-acquired pneumonia admitted to participating hospitals or intensive care units will be randomized to receive one of up to three steroid-use strategies depending on availability and acceptability:

- No corticosteroid including hydrocortisone (no placebo)
- Shock-dependent hydrocortisone while the patient is in septic shock
- Fixed duration dexamethasone for 10 days

At this participating site the following interventions have been selected within this domain:

- No corticosteroid including hydrocortisone (no placebo)
- Shock-dependent hydrocortisone while the patient is in septic shock
- Fixed duration dexamethasone for 10 days

This domain includes patients aged ≥ 28 days old (corrected gestational age). In this region, this domain will be offered to eligible participants aged:

- ≥ 28 days and < 12 years old
- ≥ 12 years and < 18 years old
- ≥ 18 years old

Is the site participating in the Corticosteroid domain? YES / NO

(If yes, please also indicate participation in the different states in the table on next page)
